

Flaring & Emission

Reduction Roundtable

Flaring and emissions are key public issues for all and gas production. However, solutions are emerging to reduce flaring and emissions from oil and gas productions. The Flaring and Emissions Reduction Roundtable (FERR) is a one – day event developed to highlight successful and emerging technologies with the goal to speed adaption. The scope will include gas emissions reduction methods and emissions monitoring technologies. Energy conversion technologies are of interest as well as transportation. The event has been structured to be highly interactive roundtable with end-user presentation supported by vendor exhibitions and emerging technologies session.
